Objective: Seeking Software Engineer Internship for Summer 2024

EDUCATION

Stevens Institute of Technology <i>Ph.D. in Computer Engineering</i>	Jan 2022 - Expected Dec 2024
Temple University <i>Ph.D. in Computer & Information Science</i>	Sep 2019 - Dec 2021
Temple University (Dual Bachelor's Master's Degree program) <i>M.S. in Computer & Information Science</i>	Sep 2017 - May 2019
University of Science and Technology of China (USTC) <i>B.S. in Mathematics and Applied Mathematics</i>	Sep 2014 - Jun 2018

SKILLS

- **Programming Languages:** Python, Java, JavaScript, C/C++, SQL, HTML/CSS, Swift
- **Tools & Frameworks:** Wireshark, Flask, Express.js, Postman, SQLite, Android Studio, Git, SmartThings SDKs, nRF5 SDK, Z-Stack, OpenWrt, Firebase, Appium, Alexa Skills Kit, AWS Lambda, Amazon EC2

SELECTED RESEARCH PROJECTS

Discovering and Exploiting Vulnerability on Zigbee Devices <ul style="list-style-type: none">• Revealed a vulnerability - <i>Zigbee Hidden Attributes</i> on commodity Zigbee devices and implemented an end-to-end attack by developing a customized Zigbee device in C on an nRF52840 DK using nRF5 SDK to exploit the vulnerability.• Disclosed this vulnerability to device manufacturers and received acknowledgements from Samsung, Amazon, and Connectivity Standards Alliance (CSA). Amazon awarded a \$2,500 bounty for the valuable findings.• The paper <i>The Hidden Gems or Hidden Germs? Demystifying and Exploiting Zigbee Hidden Attributes</i> has been submitted to a top conference on security and privacy.	Nov 2022 - Feb 2023
Defensive System against the Delay Attacks in Smart Homes <ul style="list-style-type: none">• Built a system to connect different types of IoT devices and integrate with two IoT cloud platforms (i.e., IFTTT and Sam-sung SmartThings) using JavaScript with OAuth 2.0. A database was implemented using SQLite.• Proposed a timeout-based approach to detect the delay attacks and creatively used OpenVPN to handle them.• The paper <i>MP-Mediator: Detecting and Handling the Stealthy IoT Event and Command Delay Attacks</i> has been accepted by RAID 2023.	Jan 2022 - Jun 2022
Detection of Malicious Local Attacks on IoT Devices <ul style="list-style-type: none">• Built an OpenWrt Wi-Fi router on a Raspberry Pi and adopted tcpdump to remotely capture network traffic. Used Python scripts to analyze network layer information to detect malicious attacks.• Simulated malicious attacks by developing an iOS app to send malicious commands to the victim IoT devices.• The paper <i>IoTTracer: Detecting Malicious Local Attacks on IoT Devices by Utilizing IoT System-level Traffic Patterns</i> has been submitted to a top conference on security and privacy.	Apr 2021 - Dec 2021
End-to-End Smart Speaker Protection System <ul style="list-style-type: none">• Developed an Android app with Firebase Cloud Messaging integrated to measure the proximity of the user to the smart speaker without manual operation.• Built an end-to-end system in Python to detect and block unauthorized voice commands using traffic analysis.• The paper <i>VoiceGuard: An Effective and Practical Approach for Detecting and Blocking Unauthorized Voice Commands to Smart Speakers</i> has been accepted by DSN 2023.	Sep 2020 - Mar 2021
