SKILLS

- Programming Languages: Python, Java, JavaScript/Node.js, C/C++, HTML/CSS, Lua, SQL, Swift
- Frameworks: LangChain, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, Flask, Express.js, React.js
- Tools & Services: Docker, Postman, Linux CLI Tools, Redis, OpenAI API, Git, Firebase, AWS, GCP, Wireshark, tcpdump

SELECTED PROJECTS

Cross-Language Evaluation of IoT Device Drivers for Security Verification Using LangChain

Oct 2023 - April 2024

- · Create a local database using Redis to store embeddings of device driver code generated by OpenAI Embedding model.
- Build a RAG model on a local Hugging Face LLM using the LangChain framework to retrieve code by sequential queries
 with structured prompts and employ an Output Parser to format each response for the subsequent query.
- · Build an LLM-based Agent equipped with tools to discover discrepancies in the implementation of device driver code.

Computer Vision based IoT Device Event Verification

Mar 2023 - Sep 2023

- · Collected images of each IoT device from camera video data and created image pairs as the training and testing datasets.
- · Built a Siamese neural network using TensorFlow to identify variations in the status of same device from image pairs.
- · Evaluated the proposed deep learning model in the real-world testbeds to verify IoT device events.

Discovering, Exploiting and Reporting Vulnerability on Zigbee Devices

Nov 2022 - Feb 2023

- Discovered a vulnerability Zigbee Hidden Attributes that exists on commercial devices, including Amazon Echo 4th Gen.
- Simulated an end-to-end attack by developing a customized Zigbee light switch in C using nRF5 SDK.
- Disclosed this vulnerability to device manufacturers and received acknowledgments from Samsung, Amazon, and the Connectivity Standards Alliance (CSA). Amazon awarded a \$2,500 bounty (Ranked 16) for the valuable findings.

Customized Local Server for Connecting IoT Devices to Cloud Platforms

Jan 2022 - Jun 2022

- Developed an one-stop-for-all local server using **Node.js** on **Ubuntu** to connect various types of IoT devices.
- Integrated with two cloud platforms (IFTTT and Samsung SmartThings) using **Node.js** and implemented **OAuth 2.0** for authentication, enabling device management on the cloud platforms for previously unsupported IoT devices.
- · Implemented a database using SQLite to manage connected devices and handle tokens received from cloud platforms.

End-to-End Smart Speaker Protection System

Sep 2020 - Mar 2021

- Developed a transparent proxy in Python to redirect network traffic of smart speaker for real-time analysis.
- · Created an analysis tool in Python to detect voice invocations and trigger Firebase Cloud Messaging (FCM) notifications.
- Developed an Android app in Java with FCM integrated to measure smart speaker Bluetooth RSSI upon notifications.
- · Implemented an end-to-end system using Python to detect and block unauthorized voice commands based on RSSI.

WORK EXPERIENCE

Security Research Intern @ Keysight

May 2024 - Present

- · Conducted security testing on IoT devices using fuzzing techniques over Wi-Fi and Bluetooth to identify vulnerabilities.
- Utilized UART interfaces with Minicom to extract device firmware, enabling low-level interaction and firmware access.
- $\bullet \ \ Employed \ Serial \ Wire \ Debug \ (SWD) \ protocols \ with \ Open OCD \ and \ GDB \ for \ in-depth \ debugging \ and \ firmware \ analysis.$
- $\bullet \ \ Revealed \ several \ critical \ vulner abilities \ on \ Eufy \ Smart \ Lock \ and \ disclosed \ them \ to \ Anker \ with \ each \ documented \ in \ detail.$

EDUCATION

Stevens Institute of Technology

Jan 2022 - Expected Dec 2024

Ph.D. in Computer Engineering

Temple University (Continued at Stevens Institute of Technology) *Ph.D. Program in Computer and Information Sciences*

Sep 2019 - Dec 2021

Temple University (Dual Bachelor's Master's Degree program)

Sep 2017 - May 2019

M.S. in Computer Science

Sep 2014 - Jun 2018

University of Science and Technology of China

B.S. in Mathematics and Applied Mathematics
